

Date: August 2021

VIRTUAL COACHING CLASSES ORGANIZED BY BOS, ICAI

INTERMEDIATE LEVEL PAPER 8A : FINANCIAL MANAGEMENT

WORKING CAPITAL

Faculty: CA Manobhav Verma

Working Capital

- Working Capital (WC) = Current Assets (CA) – Current Liabilities (CL)

Current Assets

- Expected to be realized/consumed/sold within normal operating cycle or one year
- Inventory, Receivables, Cash & Cash Equivalents, Prepaid expenses

Current Liabilities

- Expected to be settled in normal operating cycle or one year
- Settled either by use of current assets or by creation of new current liability
- Trade Payables, Outstanding Expenses

- On the basis of value WC can be defined as gross (CA) or net (CA-CL). On the basis of time it can be defined as permanent or temporary (due to fluctuation in sales volume)
- WC should be maintained at an optimum level (GR: current ratio of 2 and quick ratio of 1 preferred but depends on several factors). Over investment will carry opportunity cost or loss of inventory and Under investment may lead to solvency issues and also loss of sales

Types of Working Capital

Significance of Working Capital

Maintaining adequate working capital is not just important in the short-term, sufficient liquidity must be maintained in order to ensure the survival of the business in the long-term as well. When businesses make investment decisions, they must not only consider the financial outlay involved with acquiring the new machine or the new building, etc., but must also take account of the additional current assets that are usually required with any expansion of activity. For e.g.:

- Increased production leads to holding of additional stocks of raw materials and work-in-progress.
- An increased sale usually means that the level of debtors and the finished goods inventory requirements will increase.
- A general increase in the firm's scale of operations tends to imply a need for greater levels of working capital.

Determinants of Working Capital

- Working Capital Management involves maintaining adequate / optimum WC and its Financing

Factors to be considered for planning WC Requirements:

- 1) Nature of Business (example: restaurant vs pharmacy)
- 2) Type of Products – durable or perishable
- 3) Operating Efficiency
- 4) Inventory techniques, Receivables Policy & Cash holding requirements
- 5) Price level changes
- 6) Short term financing options
- 7) Market & Demand conditions – demand > production then less inventory
- 8) Manufacturing Policies – steady production or seasonal
- 9) Credit Policy

Scope of WC Management

- Working Capital Management involves 3 Es : Economy in financing, Efficiency in utilisation & Effectiveness in achieving the intended objectives.
- Scope of WC Management considers : a) Liquidity & Profitability and b) Investment & Financing

a) Trade off between Components of WC – Increasing Profitability without affecting Liquidity

Component	Advantages of Higher Level (Profitability)	Trade off (between profitability & liquidity)	Advantages of Lower Level (Liquidity)
Inventory	Fewer stock-outs	Optimum Level – EOQ, JIT	Requires less capital but probable stock-out & loss of reputation.
Receivables	Higher Credit period – More customers > Sales	Evaluate Credit Policy – use debt management services - factoring	Lesser credit period – more cash sales – fails to boost revenue
Cash & Cash Equivalents	Payables are honored in time > improves goodwill	Cash budgets & other techniques	Investment in other avenues
Prepayments	Profitable in Inflation	Cost-benefit analysis to be done	Improves / Maintains liquidity
Payables	Funds can be invested	Evaluate credit policy pros & cost	Payables are honored in time > improves goodwill

Scope of WC Management

b) Investing & Financing – Investment in WC relates to “How Much” and Financing relates to “Where from”

“How Much” i.e. optimum WC depends on factors already discussed and organizational policy

Aggressive

Lower levels: less inventory, strict credit policy, less cash
Lower CA/FA ratio

+ive – Less investment
- ive – Less Growth

Moderate

Balances risk & Return,
Efficient use of funds

Mid way approach

Conservative

Higher Levels: more inventory & cash, liberal credit policies
Higher CA/FA ratio

+ ive – growth in sales value & goodwill
- Ive – higher risk of bad debts, opportunity loss

Scope of WC Management

Current Assets to Fixed Assets

- Optimum level of current assets to maximize shareholders' wealth
- Requirement of CA increases with expansion but at decreasing rate due to efficiency
- Higher Ratio refers to Conservative policy and lower indicates Aggressive policy, also has inverse relationship with return on assets.

Earnings before Interest and Taxes (EBIT)	2,00,000	2,00,000	2,00,000
Current Assets	5,00,000	4,00,000	3,00,000
Fixed Assets	5,00,000	5,00,000	5,00,000
Total Assets	10,00,000	9,00,000	8,00,000
Return on Total Assets (EBIT ÷ Total Assets)	20%	22.22%	25%
Current Assets/Fixed Assets	1.00	0.80	0.60

Operating or Working Capital Cycle

Working Capital cycle indicates the length of time between a company's paying for materials, entering into stock and receiving the cash from sales of finished goods.

Longer the Operating cycle, more working capital is required & vice versa

$$\text{Operating Cycle} = R + W + F + D - C$$

Where,

- R = Raw material storage period
- W = Work-in-progress holding period
- F = Finished goods storage period
- D = Receivables (Debtors) collection period.
- C = Credit period allowed by suppliers (Creditors).

M/s Dhoni & Co holds raw materials on an average for 45 days, it gets credit from the supplier for 30 days, production process needs 25 days, finished goods are held for 15 days and 45 days credit is extended to debtors. Thus, $OC = 100$
 $R (45) + W (25) + F (15) + D(45) - C (30) = 100 \text{ Days}$

Operating or Working Capital Cycle

TIME IS MONEY

If you.....	Then
Collect receivables (debtors) faster	You release cash from the cycle
Collect receivables (debtors) slower	Your receivables soak up cash.
Get better credit (in terms of duration or amount) from suppliers.	You increase your cash resources.
Shift inventory (stocks) faster	You free up cash.
Move inventory (stocks) slower.	You consume more cash.

Operating or Working Capital Cycle

The various components of Operating Cycle may be calculated as shown below:

(1)	Raw Material Storage Period	$= \frac{\text{Average stock of raw material}}{\text{Average Cost of Raw Material Consumption per day}}$
(2)	Work-in-Progress holding period	$= \frac{\text{Average Work-in-progress inventory}}{\text{Average Cost of Production per day}}$
(3)	Finished Goods storage period	$= \frac{\text{Average stock of finished goods}}{\text{Average Cost of Goods Sold per day}}$
(4)	Receivables (Debtors) collection period	$= \frac{\text{Average Receivables}}{\text{Average Credit Sales per day}}$
(5)	Credit period allowed by suppliers (Creditors)	$= \frac{\text{Average Payables}}{\text{Average Credit Purchases per day}}$

Illustration

Calculate Net Operating Cycle period and Number of Operating Cycles in a year from below information (Assume 360 days in a year):

S.No.	Details	Amount (in ₹)
1	Raw material inventory consumed during the year	12,00,000
2	Average stock of raw material	1,00,000
3	Cost of production for the year	10,00,000
4	Average work-in-progress inventory	50,000
5	Cost of goods sold during the year	16,00,000
6	Average Finished Goods Inventory	80,000
7	Average collection period from debtors	45 Days
8	Average credit period availed	30 Days

Solution

Calculation of Net Operating Cycle

R – Raw Material Storage Period = Avg stock of RM / RM consumed per day = $100,000 / (12,00,000 / 360) = 30$ days

W – WIP holding period = Avg WIP inventory / Cost of Production per day = $50,000 / (10,00,000 / 360) = 18$ Days

F – Finished goods storage period = Avg FG stock / COGS per day = $80,000 / (16,00,000 / 360) = 18$ Days

D – Debtors collection period given = 45 Days

C – Credit period given by suppliers = 30 days

Thus, Net Operating Cycle = $R + W + F + D - C = 30 + 18 + 18 + 45 - 30 = 81$ Days

Number of Operating Cycles in a year = $360 / 81 = 4.44$

Components for WC (CA – CL)

(i) Raw Materials Inventory:

$$\frac{\text{Estimated Production (units)}}{12 \text{ months / 365 days}^*} \times \text{Estimated Cost per unit} \times \text{Average raw material storage period}$$

(ii) Work-in-Progress Inventory:

$$\frac{\text{Estimated Production (units)}}{12 \text{ months / 365 days}^*} \times \text{Estimated WIP cost per unit} \times \text{Average W-I-P holding period}$$

(iii) Finished Goods:

$$\frac{\text{Estimated Production (units)}}{12 \text{ months / 365 days}^*} \times \text{Estimated Cost of production per unit} \times \text{Average storage period}$$

(iv) Receivables (Debtors):

$$\frac{\text{Estimated Credit Sales unit}}{12 \text{ months / 365 days}^*} \times \text{Cost of sales (excluding depreciation) per unit} \times \text{Average collection period}$$

(v) Cash and Cash equivalents: Minimum desired Cash and Bank balance to be maintained

(vi) Trade Payables (Creditors):

$$\frac{\text{Estimated credit purchase}}{12 \text{ months / 365 days}^*} \times \text{Credit period allowed by suppliers}$$

(vii) Direct Wages:

$$\frac{\text{Estimated labour hours} \times \text{wages rate per hour}}{12 \text{ months / 365 days}^*} \times \text{Average time lag in payment of wages}$$

(viii) Overheads (other than depreciation and amortization):

$$\frac{\text{Estimated Overheads}}{12 \text{ months / 360 days}^*} \times \text{Average time lag in payment of overheads}$$

*Number of days in a year may be taken as 365 or 360 days.

In practice for Current Assets (Debtors, Finished Goods) – cash cost is considered i.e. exact funds required < CA (eg: Cost of Sales is used for debtors & that too excluding depreciation or any other non cash costs)

Estimation of WC Requirements

		Amount	Amount	Amount			Amount	Amount	Amount
I.	Current Assets:				II.	Current Liabilities:			
	Inventories:					Trade Payables		---	
	- Raw Materials	---				Bills Payables		---	
	- Work-in-process	---				Wages Payables		---	
	- Finished goods	---	---			Payables for overheads		---	---
	Receivables:				III.	Excess of Current Assets over Current Liabilities [I – II]			---
	- Trade debtors	---			IV.	Add: Safety Margin			---
	- Bills	---	---		V.	Net Working Capital [III + IV]			---
	Minimum Cash Balance		---						
	Gross Working Capital		---	---					

Effect of Double Shift- greater use of fixed assets shall yield greater efficiency, although additional working capital may be required but it may not be double in proportion. Also, there should be no impact on WIP as 1st shift WIP shall be completed in 2nd and the closing WIP shall be from 2nd shift now.

Question

On 1st January, the Managing Director of Bhawani Ltd. Is curious to know the amount of working capital that will be required during the year. Compute the working capital requirements forecast based on below information:

Production during the previous year was 1,20,000 units. It is planned that this level of activity would be maintained during the present year. Raw materials are expected to remain in store for an average of 2 months before issue to production.

The expected ratios of the cost to selling prices are Raw materials 60%, Direct wages 10% and Overheads 20%.

Each unit is expected to be in process for one month, the raw materials being fed into the pipeline immediately and the labour and overhead costs accruing evenly during the month. Finished goods will stay in the warehouse awaiting dispatch to customers for almost 3 months.

Credit allowed by creditors is 2 months from the date of delivery of raw material. Credit allowed to debtors is 3 months from the date of dispatch. There is a regular production and sales cycle.

Selling price is ₹ 5 per unit. Wages and overheads are paid on the 1st of each month for the previous month. The company normally keeps cash in hand to the extent of ₹ 40,000.

Solution

Inventory : **Raw Material (2 months)** = $1,20,000 \times 5 \times 60\% \times 2/12 = ₹ 60,000$

Finished Goods = $1,20,000 \times 5 \times 90\% \times 3/12 = ₹ 1,35,000$

Work in Progress comprises of raw material, labour & overhead (accruing evenly during a month)

Raw Material (1 month) = $60,000/2 = ₹ 30,000$

Labour & O/H (1 month) = $6,00,000 \times 30\% \times 0.5 /12$ (accrues evenly) = ₹ 7,500

Thus, Total WIP = ₹ 37,500

Debtors (3 months) = $6,00,000 \times 90\%$ (cost of sales) $\times 3/12 = ₹ 1,35,000$

Creditors (2 months) = $6,00,000 \times 60\% \times 2/12 = ₹ 60,000$

Wages & Overheads Payable = $6,00,000 \times 30\% \times 1/12 = ₹ 15,000$

Cash & Bank given as ₹ 40,000.

Thus, Working Capital = CA – CL = $(60,000+1,35,000+37,500+1,35,000+40,000) – (60,000+15,000) = ₹ 3,32,500$

Question

Particulars	Amount (in ₹)
Sales (at two months' credit)	18,00,000
Materials consumed (suppliers extend two months' credit)	4,50,000
Wages paid (paid one month in arrear)	3,60,000
Cash manufacturing expenses (Also paid one month in arrear)	4,80,000
Administrative expenses (paid one month in arrear)	1,20,000
Sales promotion expenses (paid quarterly in advance)	60,000

The company sells its products on gross profit of 25%. Depreciation is considered as a part of the cost of production. It keeps one month's stock each of raw materials and finished goods, and a cash balance of ₹ 50,000.

Assuming a 20% safety margin, calculate the working capital requirements of the company on cash cost basis. Ignore work-in-process 😊

Solution

Current Assets

Inventory : Raw Material = $4,50,000 \times \frac{1}{12} = ₹ 37,500$

Finished Goods (M+L+O/H) = $(4,50,000+3,60,000+4,80,000) \times \frac{1}{12} = 12,90,000 \times \frac{1}{12} = ₹ 1,07,500$

Debtors (based on cost of sales) = $(12,90,000+1,20,000+60,000) \times \frac{2}{12} = 14,70,000 \times \frac{2}{12} = ₹ 2,45,000$

Prepaid Expenses (Sales Promotion) = $60,000 \times \frac{1}{4} = ₹ 15,000$ Cash = 50,000

Thus, Total Current Assets or Gross Working Capital = ₹ 4,55,000

Current Liabilities

Creditors = $4,50,000 \times \frac{2}{12} = ₹ 75,000$ Wages & other Expenses Payable = $9,60,000 \times \frac{1}{12} = ₹ 80,000$

Thus, Total Current Liabilities = ₹ 1,55,000

Net Working Capital = CA – CL = ₹ 3,00,000 Add: Margin of Safety 20% = ₹ 3,60,000

Question

Samreen Enterprises has been operating its manufacturing facilities till 31.3.2017 on a single shift working with the following cost structure:

	Per unit (₹)
Cost of Materials	6.00
Wages (out of which 40% fixed)	5.00
Overheads (out of which 80% fixed)	5.00
Profit	2.00
Selling Price	18.00
Sales during 2016-17 – ₹ 4,32,000.	

As at 31.3.2017 the company held:

	(₹)
Stock of raw materials (at cost)	36,000
Work-in-progress (valued at prime cost)	22,000
Finished goods (valued at total cost)	72,000
Sundry debtors	1,08,000

In view of increased market demand, it is proposed to double production by working an extra shift. It is expected that a 10% discount will be available from suppliers of raw materials in view of increased volume of business. Selling price will remain the same. The credit period allowed to customers will remain unaltered. Credit availed of from suppliers will continue to remain at the present level i.e., 2 months. Lag in payment of wages and expenses will continue to remain half a month.

You are required to PREPARE the additional working capital requirements, if the policy to increase output is implemented.

Solution

Sales for 2016-17 = 4,32,000 @ ₹ 18/- , thus present volume = 24,000 units (single shift)

Closing Stock of Raw Material = 36,000 , thus units = 36,000 / 6 = 6,000 (single shift)

Closing Work in Process = 22,000, thus units = 22,000 /11 (Prime Cost = Material + Labour) = 2,000 (Single shift but **shall not change with double shift as it will be only the 2nd shift WIP**)

Closing Stock of FG = 72,000, thus units = 72,000/16 (total cost) = 4,500 (single shift)

Statement of Cost at Single & Double Shift

	24,000 units		48,000 Units	
	Per unit (₹)	Total (₹)	Per unit (₹)	Total (₹)
Raw materials	6.00	1,44,000	5.40	2,59,200
Wages - Variable	3.00	72,000	3.00	1,44,000
Fixed	2.00	48,000	1.00	48,000
Overheads - Variable	1.00	24,000	1.00	48,000
Fixed	4.00	96,000	2.00	96,000
Total cost	16.00	3,84,000	12.40	5,95,200
Profit	2.00	48,000	5.60	2,68,800
	18.00	4,32,000	18.00	8,64,000

Remains same irrespective of double shift

Balancing Figure

Comparative Statement of Working Capital Requirement

	Single Shift			Double Shift		
	Unit	Rate (₹)	Amount (₹)	Unit	Rate (₹)	Amount (₹)
Current Assets						
Inventories :						
Raw Materials	6,000	6.00	36,000	12,000	5.40	64,800
Work-in-Progress	2,000	11.00	22,000	2,000	9.40	18,800
Finished Goods	4,500	16.00	72,000	9,000	12.40	1,11,600
Sundry Debtors	6,000	16.00	96,000	12,000	12.40	1,48,800
Total Current Assets: (A)			2,26,000			3,44,000
Current Liabilities						
Creditors for Materials	4,000	6.00	24,000	8,000	5.40	43,200
Creditors for Wages	1,000	5.00	5,000	2,000	4.00	8,000
Creditors for Expenses	1,000	5.00	5,000	2,000	3.00	6,000
Total Current Liabilities: (B)			34,000			57,200
Working Capital: (A) – (B)			1,92,000			2,86,800

Additional Working Capital requirement = ₹ 2,86,800 – ₹ 1,92,000 = ₹ 94,800

Treasury Management

GOALS

Maximize return on available cash

Minimize interest cost on borrowings

Efficient mobilization of cash in ventures

Hedging – Effective dealing in forex & commodity

Treasury Department Functions

Cash Management –
Managing cash collection & payment & investment of surplus funds

Banking – Maintaining good relations with bankers, negotiating interest rates

Fund Management –
Planning & sourcing short/medium/long term needs & capital structure decisions

Currency Management –
Matching receipts & payments of same currency, hedging the exchange fluctuations by forward contracts

Corporate Finance –
Acquisition & divestiture activities, investor relations

Cash Management

Needs for Cash

- **Transaction Need** – day to day expenses & debt payments
- **Speculative Need** – taking advantage of temporary profitable opportunities
- **Precautionary Need** – providing safety against unexpected events

Cash Planning & Budgeting

- Forecasting of cash inflows and outflows to coordinate the timing of cash needs avoiding excess / shortage

Methods of Cash Budgeting

Receipts & Payments Method
Periodic information flow
through functional & Capital
budgets

Adjusted Income Method
Adjusting for delays in
payment & collection and
non cash items (Indirect
Method of CFS)

Adjusted Balance Sheet
Each asset & short term
liability is expressed as % of
sales with known LT liability
to know shortage / surplus

Cash Budget

- **Most significant device to plan & control cash receipts & payments**
- **Surplus could be invested in marketable securities & shortages can be managed by taking overdraft**

The various purposes of cash budgets are:-

- Coordinate the timings of cash needs. It identifies the period(s) when there might either be a shortage of cash or an abnormally large cash requirement;
- It also helps to pinpoint period(s) when there is likely to be excess cash;
- It enables firm which has sufficient cash to take advantage like cash discounts on its accounts payable; and
- Lastly it helps to plan/arrange adequately needed funds (avoiding excess/shortage of cash) on favorable terms.

Cash Budget

Steps involved are:-

- Selection of period covered / planning horizon
- Selecting factors affecting cash flows categorically Operating & Financial cash flows

Cash Budget for Short Period

Preparation of cash budget month by month would require the following estimates:

(a) *As regards receipts:*

1. Receipts from debtors;
2. Cash Sales; and
3. Any other source of receipts of cash (say, dividend from a subsidiary company)

(b) *As regards payments:*

1. Payments to be made for purchases;
2. Payments to be made for expenses;
3. Payments that are made periodically but not every month;
 - (i) Debenture interest;
 - (ii) Income tax paid in advance;
 - (iii) Sales tax or GST etc.
4. Special payments to be made in a particular month, for example, dividends to shareholders, redemption of debentures, repayments of loan, payment of assets acquired, etc.

Cash Budget Exercise

Prepare monthly cash budget for 6 months beginning from April 2019 on the basis of below details:

Months	Estimated Sales (₹)	Months	Estimated Sales (₹)	Months	Estimated Sales (₹)
Jan	1,00,000	Apr	80,000	July	1,00,000
Feb	1,20,000	May	60,000	Aug	80,000
Mar	1,40,000	June	80,000	Sep	60,000
				Oct	1,00,000

Months	Estimated Wages (₹)	Months	Estimated Wages (₹)	Months	Estimated Wages (₹)
Apr	9,000	June	10,000	Aug	9,000
May	8,000	July	10,000	Sep	9,000

- Of the sales, 80% is on credit and 20% for cash. 75% of the credit sales are collected within one month and the balance in second month after sale. There are no bad debt losses. Purchases amount to 80% of sales and are made on credit and paid for in the month preceding the sales
- The firm has 10% debentures of ₹ 1,20,000. Interest on these has to be paid quarterly in January, April and so on. The firm is to make an advance payment of tax of ₹ 5,000 in July, 2019.
- The firm had a cash balance of ₹ 20,000 on 1st April 2019, which is the minimum desired level of cash balance. Any cash surplus/deficit above/below this level is made up by temporary investments/liquidation of temporary investments or temporary borrowings at the end of each month (interest on these to be ignored).

Cash Budget Exercise

Statement of Collection from Debtors on Account of Credit Sale for 2019

	February	March	April	May	June	July	August	September
Total sales	1,20,000	1,40,000	80,000	60,000	80,000	1,00,000	80,000	60,000
Credit sales (80% of total sales)	96,000	1,12,000	64,000	48,000	64,000	80,000	64,000	48,000
Collections:								
One month		72,000	84,000	48,000	36,000	48,000	60,000	48,000
Two months			24,000	28,000	16,000	12,000	16,000	20,000
Total collections			1,08,000	76,000	52,000	60,000	76,000	68,000

Cash Budget Exercise

Monthly Budget from April to September 2019

Receipts:						
	<i>April</i>	<i>May</i>	<i>June</i>	<i>July</i>	<i>August</i>	<i>September</i>
Opening balance	20,000	20,000	20,000	20,000	20,000	20,000
Cash sales	16,000	12,000	16,000	20,000	16,000	12,000
Collection from debtors	1,08,000	76,000	52,000	60,000	76,000	68,000
Total cash available (A)	1,44,000	1,08,000	88,000	1,00,000	1,12,000	1,00,000
Payments:						
Purchases	48,000	64,000	80,000	64,000	48,000	80,000
Wages & salaries	9,000	8,000	10,000	10,000	9,000	9,000
Interest on debentures	3,000	---	----	3,000	---	----
Tax payment	---	---	----	5,000	----	----
Total payments (B)	60,000	72,000	90,000	82,000	57,000	89,000
Minimum cash balance desired	20,000	20,000	20,000	20,000	20,000	20,000
Total cash needed (C)	80,000	92,000	1,10,000	1,02,000	77,000	1,09,000

	<i>April</i>	<i>May</i>	<i>June</i>	<i>July</i>	<i>August</i>	<i>September</i>
Surplus - deficit (A-C)	64,000	16,000	(22,000)	(2,000)	35,000	(9,000)
Investment/financing						
Temporary Investments	(64,000)	(16,000)	----		(35,000)	-----
Liquidation of temporary investments or temporary borrowings	----	----	22,000	2,000	----	9,000
Total effect of investment/financing (D)	(64,000)	(16,000)	22,000	2,000	(35,000)	9,000
Closing cash balance (A+D-B)	20,000	20,000	20,000	20,000	20,000	20,000

Illustration

From the following information, you are required to prepare Month-wise cash budget on receipts and payments basis for the three months ending 31st March, 2019. It is anticipated that the working capital at 1st January, 2019 will be as follows:-

	₹ in '000's		₹ in '000's		₹ in '000's
Cash & Bank	545	Stock	1,300	Dividends Payable	485
Short term investments	300	Trade Creditors	2,110	Tax Due	320
Debtors	2,570	Other Creditors	200	Plant	800

Budgeted Profit Statement:	₹ in '000's		
	January	February	March
Sales	2,100	1,800	1,700
Cost of sales	1,635	1,405	1,330
Gross Profit	465	395	370
Administrative, Selling and Distribution Expenses	315	270	255
Net Profit before tax	150	125	115

Depreciation of ₹ 60,000 is included in the budgeted expenditure for each month.

Budgeted balances at the end of each months:	₹ in '000's		
	31 st Jan.	28 th Feb.	31 st March
Short term investments	700	---	200
Debtors	2,600	2,500	2,350
Stock	1,200	1,100	1,000
Trade creditors	2,000	1,950	1,900
Other creditors	200	200	200
Dividends payable	485	--	--
Tax due	320	320	320
Plant (depreciation ignored)	800	1,600	1,550

Solution

$\text{COGS} = \text{Opening Stock} + \text{Purchases} - \text{Closing Stock}$, hence $\text{Purchases} = \text{COGS} + \text{closing stock} - \text{opening stock}$

$\text{Cash Payment to Creditors} = \text{Opening Balance} + \text{Purchases} - \text{Closing Balance}$

$\text{Cash Received from Debtors} = \text{Opening Balance} + \text{Sales} - \text{Closing Balance}$

	January	February	March
COGS (A)	1,635	1,405	1,330
Closing Stock (B)	1,200	1,100	1,000
Opening Stock (C)	1,300	1,200	1,100
Purchases (A + B – C)	1,535	1,305	1,230
Creditors Opening Balance	2,110	2,000	1,950
Creditors Closing Balance	2,000	1,950	1,900
Payment to Creditors	1,645	1,355	1,280
Debtors Opening Balance (O)	2,570	2,600	2,500
Sales (S)	2,100	1,800	1,700
Debtors Closing Balance (C)	2,600	2,500	2,350
Receipts from Debtors (O + S – C)	2,070	1,900	1,850

Solution

Cash Budget for 3 Months ending 31st March 2019

	(₹, in 000's)		
	January, 2019	Feb. 2019	March, 2019
Opening cash balances	545	315	65
Add: Receipts:			
From Debtors	2,070	1,900	1,850
Sale of Investments	---	700	----
Sale of Plant	---	---	50
Total (A)	2,615	2,915	1,965
Deduct: Payments			
Creditors	1,645	1,355	1,280
Expenses	255	210	195
Capital Expenditure	---	800	---
Payment of dividend	---	485	---
Purchase of investments	400	---	200
Total payments (B)	2,300	2,850	1,675
Closing cash balance (A-B)	315	65	290

Investments decreased from 700 to Nil

Plant decreased from 1,600 to 1,550

Excluding depreciation of 60 K

Plant increased from 800 to 1600

Investments : 300 to 700 & Nil to 200

Cash Budget for Long Period

Take Cash & Bank at the beginning for the year and do below adjustments

Add

- Profit before tax and add back Depreciation
- Sales proceeds from assets
- Proceeds from fresh issue of shares or debentures
- Reduction in working capital

Less

- Dividends & taxes to be paid
- Cost of assets to be purchased (from capital budget)
- Shares or debentures to be redeemed
- Increase in Working Capital

Illustration

You are given below the Profit & Loss Accounts for two years for a company:

Profit and Loss Account

	Year 1	Year 2		Year 1	Year 2
	₹	₹		₹	₹
To Opening stock	80,00,000	1,00,00,000	By Sales	8,00,00,000	10,00,00,000
To Raw materials	3,00,00,000	4,00,00,000	By Closing stock	1,00,00,000	1,50,00,000
To Stores	1,00,00,000	1,20,00,000	By Misc. Income	10,00,000	10,00,000
To Manufacturing Expenses	1,00,00,000	1,60,00,000			
To Other Expenses	1,00,00,000	1,00,00,000			
To Depreciation	1,00,00,000	1,00,00,000			
To Net Profit	1,30,00,000	1,80,00,000		-	-
	9,10,00,000	11,60,00,000		9,10,00,000	11,60,00,000

Sales are expected to be ₹ 12,00,00,000 in year 3.

As a result, other expenses will increase by ₹ 50,00,000 besides other charges. Only raw materials are in stock. Assume sales and purchases are in cash terms and the closing stock is expected to go up by the same amount as between year 1 and 2. You may assume that no dividend is being paid. The Company can use 75% of the cash generated to service a loan. COMPUTE how much cash from operations will be available in year 3 for the purpose? Ignore income tax.

Solution

Projected Profit and Loss Account for the year 3

	Year 2 Actual (₹ in lakhs)	Year 3 Projected (₹ in lakhs)		Year 2 Actual (₹ in lakhs)	Year 3 Projected (₹ in lakhs)
To Materials consumed	350	420	By Sales	1,000	1,200
To Stores	120	144	By Misc. Income	10	10
To Mfg. Expenses	160	192			
To Other expenses	100	150			
To Depreciation	100	100			
To Net profit	180	204			
	1,010	1,210		1,010	1,210

(i) Material consumed in year 2: 35% of sales.

Likely consumption in year 3: $\text{₹}1,200 \times \frac{35}{100}$ or ₹420 (lakhs)

(ii) Stores are 12% of sales, as in year 2.

(iii) Manufacturing expenses are 16% of sales.

Cash Flow:

	(₹ in lakhs)
Profit	204
Add: Depreciation	100
	304
Less: Cash required for increase in stock	50
Net cash inflow	254

Available for servicing the loan: 75% of ₹ 2,54,00,000 or ₹ 1,90,50,000

Managing Cash Collection & Disbursements

Twin Objectives : Accelerate Collections & Defer disbursements

The prime reason for large gap between sales & realization of funds relate to 4 types of float

Billing Float	Mail Float	Cheque Processing	Bank Processing
• Time between sale of goods and mailing of invoice	• Time taken by delivery agency carrying the cheque	• Time taken to record & deposit cheque after receiving	• Time involved in clearing of funds

Collection Management: Speed up cash collections by issuing invoices quickly or by reducing the time lag between a customer pays bill and the cheque is collected and funds become available for use

- **Concentration Banking:** One major/concentration bank at HQs with multiple collection centres in different locations which can collect the cheques & deposit – reducing Mail Float
- **Lock Box System:** Renting local post-office box and authorizing bank at each location to pick up remittances in the boxes. Customers are billed with instructions to mail their remittances to the lock boxes. The bank picks up the mail several times a day and deposits the cheques in the company's account – eliminating cheque processing float.

Deferring Payments: Making full utilization of credit period allowed & taking advantage of float in this case

* Home Work – Read Illustr 9 (Praachi Ltd) on Pg 10.51 which shows the clearing with floats and also uncleared float

Cash Management Developments

- **Electronic Fund Transfer:** quick transfer of funds, instant balance updates etc
- **Zero balance account:** using marketable securities to invest any balance (sell if needed)
- **Money Market Operations:** Surplus funds invested as deposits for days / weeks as required by bargaining rates
- Investing temporary cash surplus in market instruments : debt or equity
- **Electronic Cash Management System:** ease of net banking globally during designated hours
- **Virtual Banking:** ATMs, NEFT, Use of Magnetic Ink Character recognition (MICR) etc

Management of Marketable Securities

Temporarily excess funds can be parked in short term securities that can be liquidated on need basis. Examples- government treasury bills, deposits with banks & other corporates etc. Selection of securities is governed by 3 principals:

- **Safety :** ensuring minimum risk
- **Maturity:** matching maturity with forecasted needs
- **Marketability:** Convenience, speed and cost at which security can be sold

Illustration

The following information is available in respect of Shri Bhakti company:

- On an average, debtors are collected after 45 days; inventories have an average holding period of 75 days and creditor's payment period on an average is 30 days.
- The firm spends a total of ₹ 150 lakhs annually at a constant rate and it can earn 12% on investments.

From the above information, you are required to CALCULATE: a) The cash cycle and cash turnover b) Minimum amounts of cash to be maintained to meet payments as they become due and c) Savings by reducing the average inventory holding period by 30 days.

Cash cycle = 45 days + 75 days – 30 days = 90 days (3 months) Cash turnover = 12 months (360 days)/3 months (90 days) = 4.

Minimum operating cash = Total operating annual outlay/cash turnover, = 150/4 = ₹ 37.50 lakhs.

Cash cycle = 45 days + 45 days – 30 days = 60 days (2 months). Cash turnover = 12 months (360 days)/2 months (60 days) = 6.

Minimum operating cash = 150/6 = ₹ 25 lakhs. Reduction in investments = 37.50 - 25 = ₹ 12.50 lakhs.

Thus, Savings = 12,50,000 x 12% = ₹ 1,50,000

Cash Management Models

- **William J. Baumol's EOQ Model (Inventory Type Model)** – Optimum cash level is that where carrying costs (opportunity cost) and transaction costs (brokerage) are minimum

$$C = \sqrt{\frac{2U \times P}{S}}$$

where, C = optimum cash balance, U = Annual/monthly cash disbursement,

P = fixed cost per transaction and S = Opportunity cost of ₹ 1 p.a. or p.m.

(based on assumptions like holding & transaction costs are constant, cash needs are known & is used uniformly)

- **Miller-Orr Cash Management Model (Stochastic)**- Useful where changes in cash balance occur randomly. Three control limits are set : Upper (H) , Return Point (Z) and Lower limit as zero or a lower number than Z.
 - When balances reaches H, then an amount = H-Z is invested in marketable securities
 - When it touches lower limit then some investments are liquidated and when balance is between these 3 limits, no transaction

Management of Receivables

- **Receivables Management:** Planning & Controlling the debt owed to the firm
- **Large Receivables** > Lenient credit policy, risk of bad debts, cost of collection, opportunity cost etc
- **Low Receivables** > Strict credit policy, low sales volume

3 Aspects of Receivables Management are:

1) Credit Policy: Trade-off between the profits on additional sales that arise due to credit being extended on the one hand and the cost of carrying those debtors and bad debt losses on the other.

It determines credit period, cash discount, if any > example: 2/10 Net 30

Factors affecting Credit Policy: effect on sales volume, firms policy, customers' reputation, cash discount vs Interest

2) Credit Analysis or Due Diligence: checking customer background (can enhance credit over time), risk analysis

3) Control of Receivables: following up with debtors, ageing analysis i.e. execution & monitoring of credit policy

Management of Receivables

Factors affecting Accounts Receivable Balance

- Volume of Sales
- Credit Terms
- Cash Discount
- Selection of Customers
- Paying Habits of Customers
- Operating Efficiencies

Control Points

- Supervising administration of credit
- Contribute to top management decisions & provide inputs
- Deciding the criteria for granting credit
- Bringing efficiencies in collection

Approaches to Credit Policy Evaluation

Total / Gross Approach

<i>Particulars</i>	<i>Present Policy</i>	<i>Proposed Policy I</i>	<i>Proposed Policy II</i>	<i>Proposed Policy III</i>	<i>Particulars</i>	<i>Present Policy</i>	<i>Proposed Policy I</i>	<i>Proposed Policy II</i>	<i>Proposed Policy III</i>
	₹	₹	₹	₹		₹	₹	₹	₹
A. Expected Profit:					(e) Expected Net Profit before Tax (a-b-c-d)				
(a) Credit Sales					(f) Less: Tax				
(b) Total Cost other than Bad Debts and Cash Discount					(g) Expected Profit after Tax				
(i) Variable Costs					B. Opportunity Cost of Investments in Receivables locked up in Collection Period				
(ii) Fixed Costs									
					Net Benefits (A – B)				
(c) Bad Debts									
(d) Cash discount									

- Fixed costs doesn't change amongst policies i.e. (Average unit cost – variable cost p.u.) x No. of units sold under current policy
- Opportunity cost = Total Cost of Sales x (collection period / 365) x Required Rate of Return

Approaches to Credit Policy Evaluation

Incremental Approach – Every number is presented on incremental basis

B. Required Return on Incremental Investments:				
(a) Cost of Credit Sales	*****	*****	*****	*****
(b) Collection Period (in days)	*****	*****	*****	*****
(c) Investment in Receivable (a × b/365 or 360)	*****	*****	*****	*****
(d) Incremental Investment in Receivables	*****	*****	*****	*****
(e) Required Rate of Return (in %)	*****	*****	*****	*****
(f) Required Return on Incremental Investments (d × e)	*****	*****	*****	*****
Incremental Net Benefits (A – B)	*****	*****	*****	*****

- Fixed costs doesn't change amongst policies i.e. (Average unit cost – variable cost p.u.) x No. of units sold under current policy
- Opportunity cost = Total Cost of Sales x (collection period / 365) x Required Rate of Return

Illustration

A trader whose current sales are in the region of ₹6 lakhs per annum and an average collection period of 30 days wants to pursue a more liberal policy to improve sales. A study made by a management consultant reveals the following information:-

Credit Policy	Increase in collection period	Increase in sales	Present default anticipated
A	10 days	₹ 30,000	1.5%
B	20 days	₹ 48,000	2%
C	30 days	₹ 75,000	3%
D	45 days	₹ 90,000	4%

The selling price per unit is ₹3. Average cost per unit is ₹2.25 and variable costs per unit are ₹2. The current bad debt loss is 1%. Required return on additional investment is 20%. Assume a 360 days year.

ANALYSE which of the above policies would you recommend for adoption?

Expected Return Approach (Incremental Profit / Incremental Receivable) = A(d) / B(d)					
Expected ROR		44.49%	30.70%	23.45%	12.22%

Financing of Receivables

Allows business to receive early payment in respect of their outstanding issued invoices rather than letting them sit in form of accounts receivable, of course comes at a cost.

Pledging

- Securing short term loan with receivables as collateral (funding between 50-90% of receivables)
- Involves high cost of financing

Factoring

- Outright sale of receivables to a factor or financial agency
- Can be Recourse (factor can require to replace the receivables) and can be non- recourse (factor bears the risk of loss)
- Factor charges commission & interest accordingly (basis risk) & can also withhold some amount for adjustments
- It is not a loan & hence no repayment required & balance sheet remains healthy

Statement showing the Evaluation of Factoring Proposal

	Particulars	₹
A.	Annual Savings (Benefit) on taking Factoring Service	
	Cost of Credit Administration saved	*****
	Bad Debts avoided	*****
	Interest saved due to reduction in Average collection period (Wherever applicable) [Cost of Annual Credit Sales × Rate of Interest × (Present Collection Period – New Collection Period)/360* days]	*****
	Total	*****
B.	Annual Cost of Factoring to the Firm:	
	Factoring Commission [Annual credit Sales × % of Commission (or calculated annually)]	*****
	Interest Charged by Factor on advance (or calculated annually)	*****
	[Amount available for advance or (Annual Credit Sales – Factoring Commission – Factoring Reserve)] × [$\frac{\text{Collection Period (days)}}{360} \times \text{Rate of Interest}$]	
	Total	*****
C.	Net Annual Benefits/Cost of Factoring to the Firm:	*****
	Rate of Effective Cost of Factoring to the Firm = $\frac{\text{Net Annual cost of Factoring}}{\text{Amount available for advance}} \times 100$ or $\frac{\text{Net annual Cost of Factoring}}{\text{Advances to be paid}} \times 100$	
	Advances to be paid = (Amount available for advance – Interest deducted by factor)	

Advise- Factoring services should be availed if rate of effective cost of borrowing is less than existing cost of borrowing

Illustration

Heavens Co. has credit sales of ₹ 240 lakhs and its average collection period is 30 days. The financial controller estimates, bad debt losses are around 1.5% of credit sales. The firm spends ₹ 1,40,000 annually on debtors administration. This cost comprises of telephonic and fax bills along with salaries of staff members. These are the avoidable costs. A Factoring firm has offered to buy the firm's receivables. The factor will charge 1% commission and will pay an advance against receivables on an interest @10% p.a. after withholding 10% as reserve. Suggest if they should accept the factoring proposal. (assume 360 days in a year)

Working:-

Average monthly receivables = $30 \times 240 / 360 = 20,00,000$

Factor's Commission = $1\% \times 20,00,000 = 20,000$

Factor's Retention = $10\% \times 20,00,000 = 2,00,000$

Amount available for Advance = $20,00,000 - 2,00,000$

Thus, Interest = $10\% \times 17,80,000 \times 30 / 360 = 14,833$

Net funding by factor = $17,80,000 - 14,833 = 17,65,167$

Evaluation of Factoring Proposal:-

A. Annual Savings to Heavens Co.

Administration Cost	1,40,000
Bad Debts (1.5% on 240L)	3,60,000
Total Savings	5,00,000

B. Annual Factoring Cost to Heavens Co.

Factor's Annual Commission ($20,000 \times 12$)	2,40,000
Annual Interest Charges ($14,833 \times 12$)	1,78,000
Total Costs	4,18,000

Net Savings, hence accept 82,000

Forfaiting

- Forfaiting – Relinquishing a right
- Bank buys the invoices / trade receivables from exporter who relinquishes his right to receive payment from importer
- Bank provides immediate finance to exporter without recourse
- Overseas buyer arranging for letter of credit from his bank in favour of exporter

Latest Developments & Monitoring

- 1) **Re-engineering Receivable Management** – Centralization of high Volume transactions, Alternative Payment techniques such as Integrated Voice response, Third party collections, lock boxes, direct debit etc.
- 2) **Use of Latest Technology** – Use of ERP systems to block transactions beyond a credit limit also integrated with various modules like Inventory, Electronic fund transfers etc
- 3) **Use of Financial Tools & Techniques** – due diligence for evaluating credit worthiness, use of credit rating agencies, efficient collection policies including automatic emailers, Monitoring by regular Ageing analysis etc
- 4) **Efficiency in Internal business practices** – Early issue of invoice, updating credit terms & limits, continuous monitoring, if required outsourcing etc.
- 5) **Robust Legal practices**

Illustration

Abhipra Limited has current sales of ₹ 18 lakhs per year. Cost of sales is 75% of sales and bad debts are 1% of sales. Cost of sales comprises 80 % variable costs and 20 % fixed costs, while the company's required rate of return is 14%. The company currently allows customers 30 days' credit, but is considering increasing this to 60 days' credit in order to increase sales.

It has been estimated that this change in policy will increase sales by 15 %, while bad debts will increase from 1% to 4%. It is not expected that the policy change will result in an increase in fixed costs and creditors and stock will be unchanged.

Should the company introduce the proposed policy? Analyse (Assume a 360 days year)

New level of sales will be $18,00,000 \times 1.15 = ₹ 20,70,000$

Variable costs are $80\% \times 75\% = 60\%$ of sales

Contribution from sales is therefore 40% of sales (100 – 60)

Fixed Cost are $20\% \times 75\% = 15\%$ of sales

Illustration

Particulars	Amount in ₹	Amount in ₹
Proposed investment in debtors = variable cost + fixed cost (assuming same as existing) = [(20,70,000 x 60%) + (18,00,000 x 15%)] x 60/360		252,000
Current Investment in debtors = [(18,00,000 x 60%) + (18,00,000 x 15%)] x 30/360		112,500
Increase in Investment in Debtors		139,500
Increase in Contribution = 18,00,000 x 15% x 40%		108,000
Less: Increase in Bad Debts (20,70,000 x 4% - 18,00,000 x 1%)		(64,800)
Less: Additional Financing Costs (139,500 x 14%)		(19,530)
Savings by changing the existing policy		23,670

Abhipra limited is advised to introduce the new policy

Management of Payables

Trade Payables or Creditors – Very significant source of short term finance. Slow payments can pose negative reputation, loss of early payments discount & also solvency issues at times.

Cost of Availing Credit – Early payment discount foregone, Loss of reputation if over-stepped, cost of managing

Cost of Not Availing Credit – Loss of interest , Loss of inflation benefit (if prices rise, you still pay same)

Payment Terms : 2/10, Net 30 means a credit period of 30 days and 2% discount if paid within 10 days

Annual Cost of forgoing discount:

$$\frac{360 \text{ or } 365}{\text{Credit Period} - \text{Discount Period}} \times \frac{\text{Discount \%}}{100 - \text{Discount \%}}$$

Inventory Management

Inventory : Major constituent of Working Capital

High levels of Inventory : No stockouts & less ordering cost, but more carrying cost & opportunity cost

Low levels of inventory : Less carrying costs, but more ordering costs & risks of Stock Outs, loss of reputation

Illustration

Pureair Company is a distributor of air filters to retail stores. It buys its filters from several manufacturers. Filters are ordered in lot sizes of 1,000 and each order costs ₹ 40 to place. Demand from retail stores is 20,000 filters per month, and carrying cost is ₹ 0.10 a filter per month.

- (a) COMPUTE the optimal order quantity with respect to so many lot sizes?
- (b) CALCULATE the optimal order quantity if the carrying cost were ₹ 0.05 a filter per month?
- (c) COMPUTE the optimal order quantity if ordering costs were ₹ 10?

$$EOQ = \sqrt{\frac{2(\text{Annual Demand} * \text{Cost per Order})}{\text{Annual holding cost per unit}}}$$

a) $EOQ = 4$

b) $EOQ = 5.66$

c) $EOQ = 2$

Financing of Working Capital

Permanent WC – always required irrespective of sales i.e. financed by long term sources debt & Equity

Temporary WC – can be required on & off i.e. financed by short term sources of finance

Sources of WC

- Spontaneous Sources: Trade Credit (time period allowed by suppliers), bills payable, accrued Expenses
- Inter-corporate loans / deposits
- Funds generated by operations – profits & depreciation (for replacement)
- Factoring of Receivables
- Commercial Papers – unsecured promissory note issued to raise funds for short period by highly rated firms, Maturity: 7days to 1 year, In denomination of ₹ 5 Lakhs
- Working Capital Financing by Banks – Bank Overdraft, Bank Guarantees, bills discounting etc

Maximum permissible bank finance (MPBF) recommended by RBI - Tandon Committee

- Suggests 25% of either working capital or current assets should be funded by long term funds and balance can be MPBF

Test Yourself

Q1. When a firm advises its customers to mail their payments to designated post office collection centres, the system is known as

- a) Concentration Banking
- b) Lock Box System
- c) Playing the Float
- d) Factoring

Q2. The term gross working capital is known as:

- a) Investment in Current Assets
- b) Investment in Current Liabilities
- c) Current Assets minus Current Liabilities
- d) Investment in Non-Current Liabilities

Question

PQ Ltd., a company newly commencing business in 2019 has the following projected Profit and Loss Account:

	(₹)	(₹)
Sales		2,10,000
Cost of goods sold		<u>1,53,000</u>
Gross Profit		57,000
Administrative Expenses	14,000	
Selling Expenses	<u>13,000</u>	<u>27,000</u>
Profit before tax		30,000
Provision for taxation		<u>10,000</u>
Profit after tax		<u>20,000</u>
The cost of goods sold has been arrived at as under:		
Materials used	84,000	
Wages and manufacturing Expenses	62,500	
Depreciation	<u>23,500</u>	
	1,70,000	
Less: Stock of Finished goods (10% of goods produced not yet sold)	<u>17,000</u>	
	<u>1,53,000</u>	

The cost of goods sold figure given P&L A/c relate only to finished goods and not to work-in- progress. Goods equal to 15% of the year's production (in terms of physical units) will be in process on the average requiring full materials but only 40% of the other expenses. The company believes in keeping materials equal to two months' consumption in stock.

All expenses will be paid one month in advance. Suppliers of materials will extend 1-1/2 months credit. Sales will be 20% for cash and the rest at two months' credit. 70% of the Income tax will be paid in advance in quarterly instalments. The company wishes to keep Rs. 8,000 in cash. 10% has to be added to the estimated figure for unforeseen contingencies.

Prepare an estimate of working capital.

Solution

Calculation of Working Capital Requirement for PQ Ltd

Cash	8,000
Inventory: Raw Material $96,600 \times 2/12 = 16,100$	16,100
WIP (Material $84,000 \times 15\% = 12,600$, Labour & overhead $62,500 \times 15\% \times 40\% = 3,750$ WIP = $12,600 + 3,750$)	16,350
Finished Goods $(84,000 + 62,500) \times 10\%$ (basis cash cost, hence depreciation ignored)	14,650
Debtors: 2 months of 80% of Cash Cost of Sales i.e. (Mat 96,600 + Lab & OH 66,250 + Admin 14,000 + S&D 13,000 Less Closing Stock: WIP 16,350 & FG 14,650 = $1,58,850 \times 80\% \times 2/12$)	21,180
Prepaid Expenses (Lab & OH $66,250/12 = 5,521$ + Admin & SD $27,000/12 = 2,250$ + Taxes $7,000/4 = 1,750$)	9,521
Current Assets or Gross Working Capital	85,801
Current Liabilities (Provision for Tax $10,000 - 7,000 = 3,000$ Plus Creditors for 1.5 Months of total purchases) Total Purchases : RM consumed + Closing stock = $96,600 + 16,100 = 1,12,700 \times 1.5/12 = 14,088$)	(17,088)
Current Assets – Current Liabilities (Working Capital)	68,713
Add : Contingency reserve of 10%	6,871
Thus, Total Working Capital Required	75,584

Question

Slow Payers are regular customers of Goods Dealers Ltd. and have approached the sellers for extension of credit facility for enabling them to purchase goods. On an analysis of past performance and on the basis of information supplied, the following pattern of payment schedule emerges in regard to Slow Payers:

Pattern of Payment Schedule	
At the end of 30 days	15% of the bill
At the end of 60 days	34% of the bill.
At the end of 90 days	30% of the bill.
At the end of 100 days	20% of the bill.
Non-recovery	1% of the bill.

Slow Payers want to enter into a firm commitment for purchase of goods of ₹ 15 lakhs in 20X7, deliveries to be made in equal quantities on the first day of each quarter in the calendar year. The price per unit of commodity is ₹ 150 on which a profit of ₹ 5 per unit is expected to be made. It is anticipated by Goods Dealers Ltd., that taking up of this contract would mean an extra recurring expenditure of ₹ 5,000 per annum. If the opportunity cost of funds in the hands of Goods Dealers is 24% per annum, would you as the finance manager of the seller recommend the grant of credit to Slow Payers? ANALYSE. Workings should form part of your answer. Assume year of 365 days.

Expected Profit 15L – 14.50L	50,000
Extra Cost incurred	(5,000)
Bad Debts (1% of 15L)	(15,000)
Net Additional Profit (A)	30,000

Calculation of Opportunity Cost (Amount of Debtors x RR)

Details	15%	34%	30%	20%
Total Cost*	2,18,250	4,94,700	4,36,500	2,91,000
Collection Period	30	60	90	100
Opp Cost @24%	4,305	19,517	25,831	19,134

* Total cost = 14,50,000 + 5,000 = 14,55,000

Thus, total Opportunity Cost is 68,787 against net additional profit of 30,000. Hence, proposal should be rejected.

Question

Day Ltd., a newly formed company has applied to the Private Bank for the first time for financing its Working Capital Requirements. The following information is available about the projections for the current year:

Estimated Level of Activity	Completed Units of Production 31,200 plus unit of work in progress 12,000
Raw Material Cost	₹ 40 per unit
Direct Wages Cost	₹ 15 per unit
Overhead	₹ 40 per unit (inclusive of Depreciation ₹10 per unit)
Selling Price	₹ 130 per unit
Raw Material in Stock	Average 30 days consumption
Work in Progress Stock	Material 100% and Conversion Cost 50%
Finished Goods Stock	24,000 Units
Credit Allowed by the supplier	30 days
Credit Allowed to Purchasers	60 days
Direct Wages (Lag in payment)	15 days
Expected Cash Balance	₹ 2,00,000

Assume that production is carried on evenly throughout the year (360 days) and wages and overheads accrue similarly. All sales are on the credit basis. You are required to CALCULATE the Net Working Capital Requirement on Cash Cost Basis.

Calculation of Working Capital for Day Ltd				
Details	Notes	Units / Eq Units	Working ₹	Amount in ₹
Cash				2,00,000.00
Inventory				
Raw Material	Completed + WIP	3,600.00	1,44,000.00	
WIP				
Material		12,000.00	4,80,000.00	
L & OH		6,000.00	2,70,000.00	
Finished Goods		24,000.00	20,40,000.00	29,34,000.00
Debtors				
Cash cost of sales		7,200.00	6,12,000.00	1,02,000.00
Gross WC or Current Assets				32,36,000.00
Creditors				
Raw Material Consumed		43,200.00		
Closing Stock	1 month	3,600.00		
Purchases in Units		46,800.00	18,72,000.00	-1,56,000.00
Wages Payable	50% for WIP	37,200.00	5,58,000.00	-23,250.00
Working Capital				30,56,750.00

Question

From the information and the assumption that the cash balance in hand on 1st January 2017 is ₹ 72,500 PREPARE a cash budget.

Assume that 50 per cent of total sales are cash sales. Assets are to be acquired in the months of February and April. Therefore, provisions should be made for the payment of ₹ 8,000 and ₹ 25,000 for the same. An application has been made to the bank for the grant of a loan of ₹ 30,000 and it is hoped that the loan amount will be received in the month of May.

It is anticipated that a dividend of ₹ 35,000 will be paid in June. Debtors are allowed one month's credit. Creditors for materials purchased and overheads grant one month's credit. Sales commission at 3 per cent on sales is paid to the salesman each month.

Month	Sales (₹)	Materials Purchases (₹)	Salaries & Wages (₹)	Production Overheads (₹)	Office and Selling Overheads (₹)
January	72,000	25,000	10,000	6,000	5,500
February	97,000	31,000	12,100	6,300	6,700
March	86,000	25,500	10,600	6,000	7,500
April	88,600	30,600	25,000	6,500	8,900
May	1,02,500	37,000	22,000	8,000	11,000
June	1,08,700	38,800	23,000	8,200	11,500

Cash Budget for 6 Months January - June						
Details	Jan	Feb	Mar	Apr	May	Jun
Receipts						
Cash Sales	36,000.00	48,500.00	43,000.00	44,300.00	51,250.00	54,350.00
Debtors		36,000.00	48,500.00	43,000.00	44,300.00	51,250.00
Loan					30,000.00	
Payments						
Creditors		-25,000.00	-31,000.00	-25,500.00	-30,600.00	-37,000.00
Wages	-10,000.00	-12,100.00	-10,600.00	-25,000.00	-22,000.00	-23,000.00
Overheads		-11,500.00	-13,000.00	-13,500.00	-15,400.00	-19,000.00
Assets		-8,000.00		-25,000.00		
Sales Commission	-2,160.00	-2,910.00	-2,580.00	-2,658.00	-3,075.00	-3,261.00
Dividend						-35,000.00
Opening Balance	72,500.00	96,340.00	1,21,330.00	1,55,650.00	1,51,292.00	2,05,767.00
Closing Balance	96,340.00	1,21,330.00	1,55,650.00	1,51,292.00	2,05,767.00	1,94,106.00

Question

Aneja Limited, a newly formed company, has applied to a commercial bank for the first time for financing its working capital requirements. The following information is available about the projections for the current year:

Estimated level of activity: 1,04,000 completed units of production plus 4,000 units of work-in-progress. Based on the above activity, estimated cost per unit is:

Raw material	₹ 80 per unit
Direct wages	₹ 30 per unit
Overheads (exclusive of depreciation)	₹ 60 per unit
Total cost	₹ 170 per unit
Selling price	₹ 200 per unit

Raw materials in stock: Average 4 weeks consumption, work-in-progress (assume 50% completion stage in respect of conversion cost) (materials issued at the start of the processing).

Finished goods in stock	8,000 units
Credit allowed by suppliers	Average 4 weeks
Credit allowed to debtors/receivables	Average 8 weeks
Lag in payment of wages	Average 1.5 weeks

Cash at banks (for smooth operation) is expected to be ₹ 25,000.

Assume that production is carried on evenly throughout the year (52 weeks) and wages and overheads accrue similarly. All sales are on credit basis only.

You are required to CALCULATE the net working capital required.

Calculation of Working Capital for Aneja Ltd				
Details	Notes	Units / Eq Units	Working ₹	Amount in ₹
Cash				25,000.00
Inventory				
Raw Material - 4 Weeks	Compl + WIP	8,307.69	6,64,615.38	
WIP				
Material	100%	4,000.00	3,20,000.00	
L & OH	50%	2,000.00	1,80,000.00	
Finished Goods	Given	8,000.00	13,60,000.00	25,24,615.38
Debtors - 8 Weeks				
Cash cost of sales	Prod - CI Stock	96,000.00	1,63,20,000.00	25,10,769.23
Gross WC or Current Assets				50,60,384.62

Creditors - 4 Weeks

Raw Material Consumed		1,08,000.00		
Closing Stock	4 Weeks	8,307.69		
Purchases in Units		1,16,307.69	93,04,615.38	-7,15,739.64
Wages Payable - 1.5 Weeks	50% for WIP	1,06,000.00	31,80,000.00	-91,730.77
Working Capital				42,52,914.20

Question

The following figures and ratios are related to a company:

(i) Sales for the year (all credit)	₹ 90,00,000
(ii) Gross Profit ratio	35 percent
(iii) Fixed assets turnover (based on cost of goods sold)	1.5
(iv) Stock turnover (based on cost of goods sold)	6
(v) Liquid ratio	1.5:1
(vi) Current ratio	2.5:1
(vii) Receivables (Debtors) collection period	1 month
(viii) Reserves and surplus to Share capital	1:1.5
(ix) Capital gearing ratio	0.7875
(x) Fixed assets to net worth	1.3 : 1

You are required to PREPARE:

- (a) Balance Sheet of the company on the basis of above details.
- (b) The statement showing working capital requirement, if the company wants to make a provision for contingencies @15 percent of net working capital.

Solution

Workings:

1. $\text{COGS} = \text{Sales} - \text{GP} = 90,00,000 - 35\% = 58,50,000$
2. $\text{Fixed Assets} = \text{COGS} / \text{FA Turnover Ratio} = 58,50,000 / 1.50 = 39,00,000$
3. $\text{Closing Stock} = \text{COGS} / \text{Stock Turnover Ratio} = 58,50,000 / 6 = 9,75,000$
4. $\text{Current Ratio} / \text{Liquid Ratio (Quick Assets Ratio)} = 2.5 / 1.5 = \text{Current Assets} / (\text{CA} - \text{Closing Stock})$
i.e. $2.5 \text{ CA} - 2.5 \text{ Closing Stock} = 1.5 \text{ CA}$ and hence $\text{CA} = 2.5 \times 9,75,000 = 24,37,500$
5. $\text{Current Liabilities} = \text{Current Assets} / \text{Current Ratio} = 24,37,500 / 2.5 = 9,75,000$
6. $\text{Liquid Assets} = \text{CA} - \text{Closing Stock} = 24,37,500 - 9,75,000 = 14,62,500$
7. $\text{Debtors Collection Period} = 12 / \text{Debtors Turnover} = 12 / (\text{Sales}/\text{Debtors})$, hence $\text{Debtors} = \text{Sales} \times \text{Debtors collection period} / 12 = 90,00,000 \times 1 / 12 = 7,50,000$
8. $\text{Cash / bank} = \text{Liquid Assets} - \text{Debtors} = 14,62,500 - 7,50,000 = 7,12,500$
9. $\text{Net Worth} = \text{Fixed Assets} / 1.3 = 39,00,000 / 1.3 = 30,00,000 = \text{Share Capital} + \text{Reserves \& Surplus (R\&S)}$
10. $\text{R\&S} / \text{Sh Capital} = 1 / 1.5$ i.e. $(\text{R\&S} + \text{Sh Capital}) / \text{Sh Capital} = 2.5 / 1.5 = \text{Net Worth} / 1.5$, Thus $\text{R\&S} = 30,00,000 / 1.5 = 20,00,000$ and $\text{Sh Capital} = 30,00,000 - 20,00,000 = 10,00,000$
11. $\text{Long Term Liabilities} = \text{Capital Gearing} \times \text{Shareholders Funds (Net Worth)} = 30,00,000 \times 0.7875 = 23,62,500$

Solution

Balance Sheet of the Company

Particulars	Figures as the end of 31-03-2020 (₹)	Figures as the end of 31-03-2019 (₹)
I. EQUITY AND LIABILITIES		
Shareholders' funds		
(a) Share capital	10,00,000	-
(b) Reserves and surplus	20,00,000	-
Non-current liabilities		
(a) Long-term borrowings	23,62,500	-
Current liabilities	9,75,000	-
TOTAL	63,37,500	-
II. ASSETS		
Non-current assets		
Fixed assets	39,00,000	-
Current assets		
Inventories	9,75,000	-

B. Current Liabilities:		
Total Current Liabilities		9,75,000
Net Working Capital (A – B)		14,62,500
Add: Provision for contingencies (15% of Net Working Capital)		2,19,375
Working capital requirement		16,81,875

Question

The Alliance Ltd., a Petrochemical sector company had just invested huge amount in its new expansion project. Due to huge capital investment, the company is in need of an additional ₹ 1,50,000 in working capital immediately. The Finance Manger has determined the following three feasible sources of working capital funds:

- (i) Bank loan: The Company's bank will lend ₹ 2,00,000 at 15%. A 10% compensating balance will be required, which otherwise would not be maintained by the company.
- (ii) Trade credit: The company has been offered credit terms from its major supplier of 3/30, net 90 for purchasing raw materials worth ₹ 1,00,000 per month.
- (iii) Factoring: A factoring firm will buy the company's receivables of ₹ 2,00,000 per month, which have a collection period of 60 days. The factor will advance up to 75% of the face value of the receivables at 12% on an annual basis. The factor will also charge commission of 2% on all receivables purchased. It has been estimated that the factor's services will save the company a credit department expense and bad debt expense of ₹ 1,250 and ₹ 1,750 per month respectively.

On the basis of annual percentage cost, ADVISE which alternative should the company select? Assume 360 days year.

Solution

- (i) **Bank loan:** Since the compensating balance would not otherwise be maintained, the real annual cost of taking bank loan would be:

$$= \frac{15}{90} \times 100 = 16.67\% \text{ p.a.}$$

- (ii) **Trade credit:** Amount upto ₹ 1,50,000 can be raised within 2 months or 60 days. The real annual cost of trade credit would be:

$$= \frac{3}{97} \times \frac{360}{60} \times 100 = 18.56\% \text{ p.a.}$$

- (iii) **Factoring:**

$$\text{Commission charges per year} = 2\% \times (\text{₹ } 2,00,000 \times 12) = \text{₹ } 48,000$$

$$\text{Total Savings per year} = (\text{₹ } 1,250 + \text{₹ } 1,750) \times 12 = \text{₹ } 36,000$$

$$\text{Net factoring cost per year} = \text{₹ } 48,000 - \text{₹ } 36,000 = \text{₹ } 12,000$$

Annual Cost of Borrowing ₹ 1,50,000 receivables through factoring would be:

$$= \frac{12\% \times 1,50,000 + \text{₹ } 12,000}{\text{₹ } 1,50,000} \times 100$$

$$= \frac{\text{₹ } 18,000 + \text{₹ } 12,000}{\text{₹ } 1,50,000} \times 100$$

$$= 20\% \text{ p.a.}$$

Advise: The company should select alternative of Bank Loan as it has the lowest annual cost i.e. 16.67% p.a.

THANK YOU
